SUMMARY

2026 Information Science Engineering graduate and full-stack developer who builds systems end to end and takes them into production. Shipped a queue-driven delivery service on Node.js, Express, Redis and PostgreSQL, an automated audit pipeline that tested roughly 6,800 third-party servers, and an automation tool running local open-source language models. Comfortable across backend, frontend and data work, and used to diving deep to find the real cause of a defect rather than the first plausible one. Based in Bengaluru.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Backend: Node.js, Express, FastAPI, Flask, REST API design, object-oriented design, MVC architecture, Redis and BullMQ job queues, OAuth 2.0, rate limiting

Frontend: React, Next.js, HTML, CSS, dashboards and internal-tool interfaces

Data: PostgreSQL, MongoDB, relational schema design, ETL pipelines, data validation

Applied AI: LLM integration, RAG pipelines, local open-source model deployment (Ollama), prompt design, evaluation of model output against defined criteria

Cloud and tooling: AWS core services (EC2, S3, IAM, VPC, RDS, DynamoDB, Lambda, CloudWatch), Docker, Git and GitHub, Playwright, Vercel, Render, Neon

Fundamentals: Data structures and algorithms, operating systems, DBMS, computer networks

EXPERIENCE

Python Full-Stack Intern, Ethnotech Academy Solutions | Feb 2026 - May 2026

- Built Asset Harmony, a smart inventory and asset management system, end to end from data model through backend to interface, delivered as a working system rather than a prototype.
- Worked to a mentor-reviewed cycle, incorporating feedback on scope and implementation across the project rather than at the end.
- Documented the build across 97 logged work entries and a full technical report, explaining design decisions to readers outside the engineering team.

PROJECTS

Email Scheduler, distributed sending service | Node.js, Express, BullMQ, Redis, PostgreSQL

- Built a service that accepts an email and delivers it at a scheduled future time, with queued background workers handling delayed sends independently of the request cycle.
- Diagnosed and fixed a rate limiter applied at the wrong layer, where the limit silently did not cover the path it was meant to protect.
- Resolved production-only failures across a split deployment, including an OAuth redirect URI mismatch and a build that skipped dev dependencies under a production environment flag.
- Shipped as a reviewed submission to an external engineering team with a clean commit history.

MCPwatch, large-scale audit and dashboard | Python, Next.js, Vercel

- Audited roughly 6,800 servers in a public registry, comparing each server's declared requirements against what it actually demanded at runtime, and found 7% with undeclared requirements and 8.5% broken outright.
- Distrusted results that looked too clean, traced the discrepancy to five bugs in my own measurement tooling, fixed them, re-ran the full audit, and published all five alongside the corrected findings so the methodology could be checked by others.
- Presented the findings as a static dashboard and a written analysis for readers deciding whether to depend on a given server.

OutreachOS, workflow automation service | Python, Gmail API, OAuth 2.0, Firecrawl

- Integrated four third-party APIs into one pipeline, handling OAuth token flow, per-service rate limits and partial failures without losing queued work.
- Ran language model inference locally to remove a hard external dependency after commercial API quotas became a bottleneck mid-build.

EDUCATION

B.E., Information Science and Engineering | 2022 - 2026

SJB Institute of Technology, Visvesvaraya Technological University, Bengaluru
CGPA: 7.6 | No backlogs

CERTIFICATIONS

AWS Cloud Technical Essentials — Amazon Web Services, via Coursera (April 2025)

ADDITIONAL

- Founder, Fury Arts:** custom poster and digital art business, run independently end to end.
- Lead, ISE Department Adventure Club,** coordinating treks and outdoor events. **Rajya Puraskar** (Governor's Award), Bharat Scouts and Guides.
